

Tokyo University of Science

Center for Data Science

The Center for Data Science was established in April 2019, under the Organization for Research Advancement, Tokyo University of Science. The primary aim of this center is to provide platforms for integrating and analyzing data from fields such as Basic Sciences, Engineering, Pharmacy, Biomedical Sciences and Management as well as to promote advanced education and research in the field of data science.

Organization for Research Advancement

The Organization for Research Advancement was established in April 2015, to improve and revitalize academic and research standards within the Tokyo University of Science, in line with the societal and national expectations from universities as well as to provide future directions and strategies for the research laboratories and organizations within our university.

This organization presently has four centers or institutes: University Research Administration Center, Research Institute for Science and Technology, Research Institute for Biomedical Sciences and Research Equipment Center. And now a new Center for Data Science has been established to improve education and research in the data sciences sector and contribute to the future society and economy.

Tokyo University of Science,
Vice President and
Organization for Research
Advancement President

Hiroshi Fujishiro

Center for Data Science

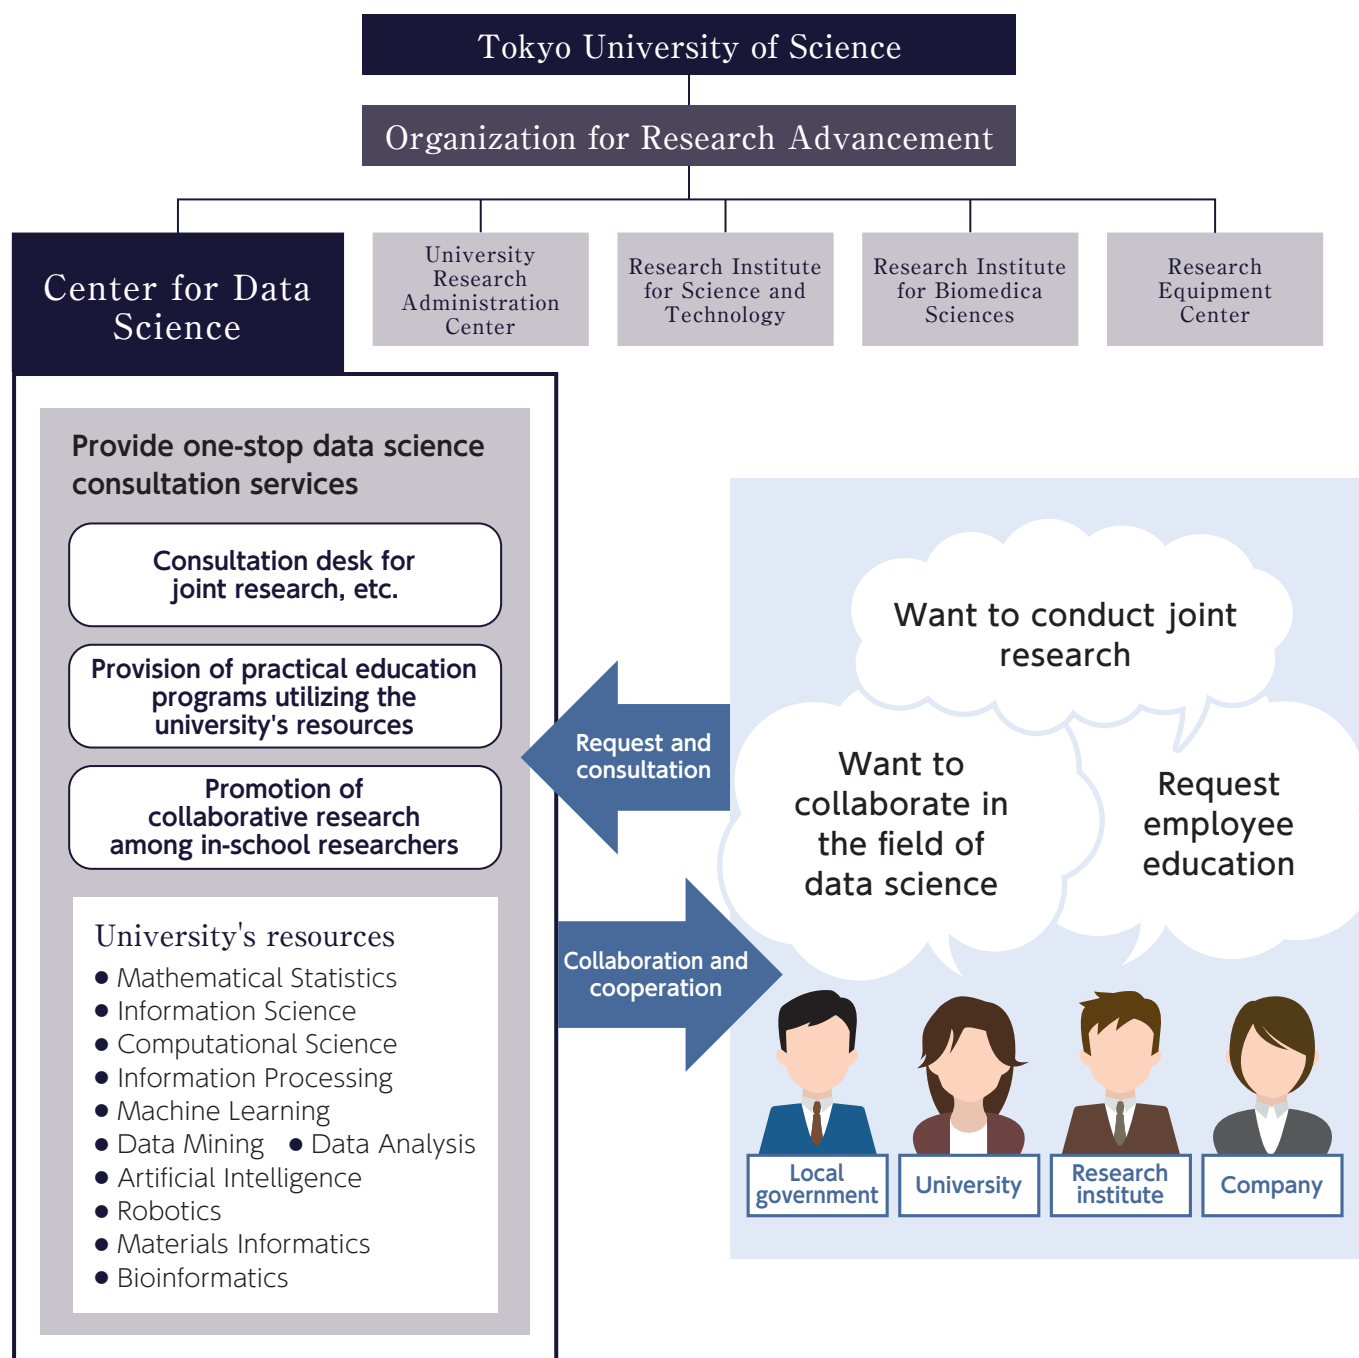

In recent years, the fourth industrial revolution based on AI, Big Data and IoT has changed society dramatically. In this context, data science is attracting attention as an interdisciplinary science for extracting and utilizing valuable information from big data. The training of data scientists with advanced technology expertise is an urgent issue. In response to these social needs, Tokyo University of Science has established a Center for Data Science. By leveraging the strengths of this university, which has faculties of science, engineering, pharmacy, biomedical science, management and research institutes, we will improve education and research in the field of data science and promote joint research and social contributions by providing platforms that integrate research in their respective specialized areas with data.

Director,
